

CAS SCIFINDER
DISCOVERY PLATFORM™

BETWEEN IDEAS AND ANSWERS ARE CONNECTIONS THAT MATTER

Best-in-class scientific information solutions that help your research community bring new ideas to life faster.

The CAS SciFinder Discovery Platform supports multiple stages and types of academic scientific research by combining task-specific information solutions, including CAS SciFinder®, CAS Formulus®, and CAS Analytical Methods™, with ChemZent® and the world-renowned CAS Content Collection™: the most complete source of scientific information in the world.

Unmatched content

Tap into the most comprehensive and current collection of journal articles and patents, substances, reactions, synthetic and analytical methods, formulations, chemical suppliers, and much more.

Specialized technology

Access task-specific solutions for retrosynthetic planning, formulation design, analytical methods comparison, biological sequence searching and analysis, and more, using a single ID and password.

Human expertise

Leverage a global network of scientists that extracts key information from the world's scientific literature, making connections only possible through the combined power of expert human analysis and advanced data technology.

FOR ACADEMIA

Support the foundational scientific pursuits of your research community

Research need

CAS SciFinder Discovery Platform

Leverage the most advanced relevance engine in the industry

Search faster and smarter with technology that anticipates your information needs and connects you to relevant and timely information at every stage in your research.

Plan your experiments with confidence

Access one true source to identify a substance and its related chemical structure, names, regulatory information, and properties, as well as reaction schemes, step-by-step experimental procedures, detailed reaction conditions, and yields.

Synthesize known and undisclosed substances

Perform a full retrosynthetic analysis to help identify and optimize synthetic routes based on cost, chemical suppliers, step-by-step methods, product yields, and more.

Explore and analyze sequences for life science research

Go beyond chemistry with all-new features to search, visualize, filter, and analyze information from one of the largest, most comprehensive collections of protein and nucleic acid sequences.

Discover better, safer drugs using bioactivity data

Explore the pharmacology of drug-target-toxicity interactions with SAR and ADMET analysis to uncover novel targets for therapeutic intervention and gauge the safety of unique compounds.

Search and compare the latest published scientific methods

Find the best protocols for your research from a collection of hundreds of thousands of analytical methods across fields of study.

Design more effective compounds more quickly

Uncover information about active ingredients and excipients to guide your design of new formulations.

Close critical gaps in chemistry literature collections

Access historical insights from *Chemisches Zentralblatt* to improve the comprehensiveness of your chemistry literature reviews.

Help your research community bring new ideas to life faster with the CAS SciFinder Discovery Platform
